

Implied return map at $R = 1$: is the model extrapolating, or clamping to the nearest map it was trained on?
 Orange inside the shaded envelope = reproducible by some training map. Only orange on GREEN and OUTSIDE the envelope is extrapolation.

envelope of ALL maps in the training band nearest map in the training band (its edge, $\alpha = \alpha_{lo}$) TRUE map generating this panel's context model's implied $E[x_{n+1} | x_n]$
