

Along the conjugacy curve $R = 1$ the dynamics are fixed (shared kneading sequence) and only the representation moves
Dashed line: the critical point $x_c = \alpha/2$

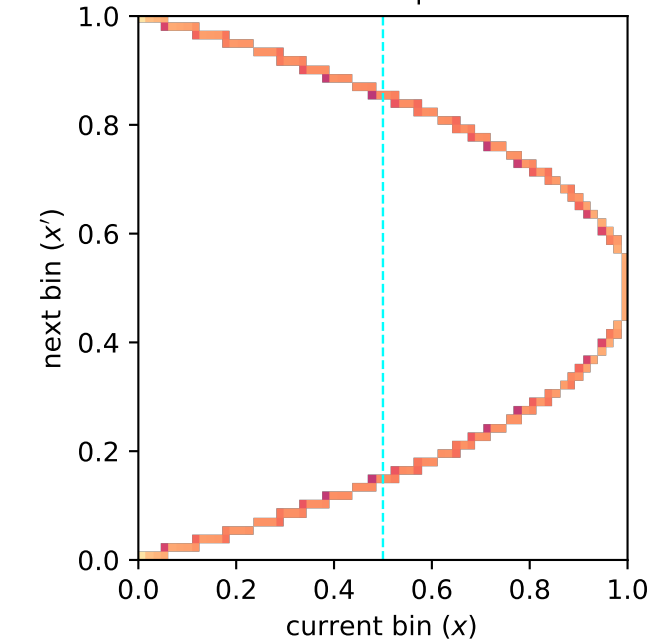

1-point occupancy: nearly identical across α

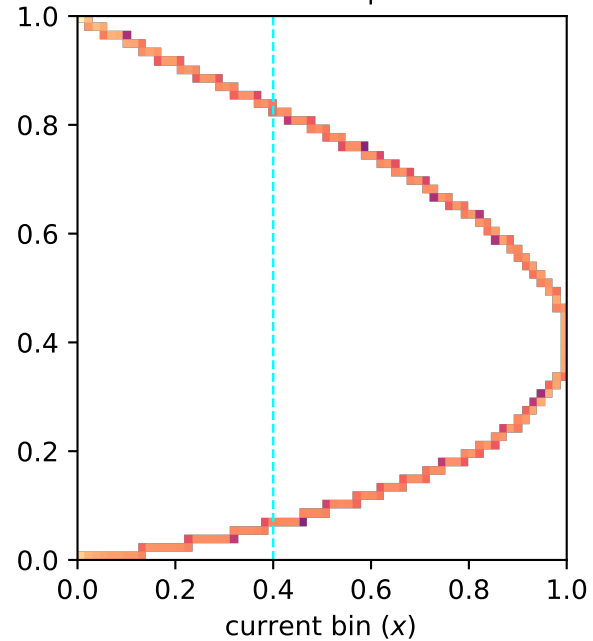

The two statistics disagree sharply
(shaded: what the marginal hides)

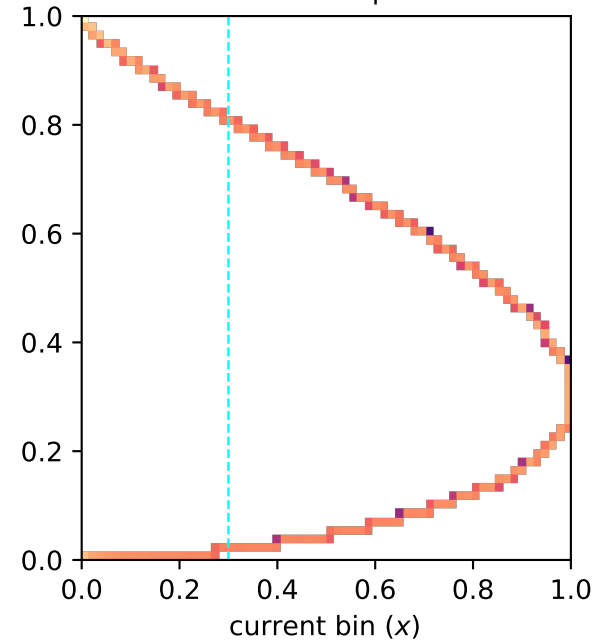

$\alpha=1$ overlap=1.00

$\alpha=0.8$ overlap=0.13

$\alpha=0.6$ overlap=0.09

$\alpha=0.5$ overlap=0.08
